Federal Tax Deposits and Refund Cash Effect

Federal Tax Deposits (USD millions) and Refund Cash Effect (USD millions) by Date

Federal tax deposits are taken from the “Cash Federal Tax Deposits” rows and are available through 02/13/2023. Refunds are shown as negative cash effects in the trend and continue through the report period. Interagency transfers are displayed separately. These reports do not, by themselves, reconcile total TGA cash activity.

Cash Direction Conventions

TGA deposits are treated as positive cash flow and TGA withdrawals as negative cash flow. Income tax refunds are converted to negative cash effect for trend analysis. Short-term cash investment deposits are treated as positive and withdrawals as negative.

Debt Transaction Logic

Gross public debt transactions are not assumed to equal TGA cash movement directly. Cash-basis adjustment data is used to reconcile debt issues and redemptions to corresponding TGA deposit and withdrawal activity. Small differences may remain because source values are reported in USD millions.

Debt Position and Limit Logic

Total federal debt is calculated as Debt Held by the Public plus Intragovernmental Holdings. Debt Subject to Limit is calculated by adjusting total debt for debt not subject to limit and other debt subject to limit. Statutory debt limit values reported as zero are treated as unavailable rather than interpreted as a literal zero-dollar limit.

Data Coverage and Precision

Source tables do not all cover identical periods. Federal Tax Deposits and Short-Term Cash Investments end on 02/13/2023, while Interagency Tax Transfers begins on 02/14/2023. Published detail may differ slightly from reported totals because of reporting precision, source adjustments, or differences in table structure.
